## MX 2000a

he MX 2000a is a high power, low profile professional power amplifier with advanced features and a flexible input. It delivers tremendous power in only two rack spaces, providing high level performance under the most demanding conditions.

A stepped linear output circuit combines high power with high efficiency to provide greater average and dynamic audio performance, while reducing normal system cooling and AC require-
ments by greater than 40\%. An automatic twospeed fan matches cooling capacity with thermal requirements.

The rear panel uses Level 1 of QSC's exclusive Open Input Architecture"' which allows the use of optional input connectors, input transformers, cinema crossovers, power limiters, precision attenuators, and other signal processing cards as they become available.

| LOAD | FTC CONTINUOUS AVERAGE | EIA wATTS |
| :---: | :---: | :---: |
|  | $20 H z-20 \mathrm{kHz}, 0.1 \%$ THD | $1 \mathrm{kHz}, 1 \%$ THD |

## OUTPUT POWER (per channel)

| 8 ohms, 20 Hz to 20 kHz, | $0.1 \%$ | THD, 450 watts |
| :--- | :--- | :--- |
| 8 ohms, 1 kHz, | $1 \%$ | THD, 475 watts |
| 4 ohms, 20 Hz to 20 kHz, | $0.1 \%$ | THD, 650 watts |
| 4 ohms, 1 kHz, | $1 \%$ | THD, 725 watts |
| 2 ohms, 1 kHz, | $1 \%$ | THD, 1000 watts* |

## OUTPUT POWER (bridged mono)

8 ohms, 20 Hz to $20 \mathrm{kHz}, 0.1 \%$ THD, 1300 watts
4 ohms, 1 kHz, $\quad 1 \%$ THD 2000 watts* *typical

## DISTORTION:

SM PTE-IM , less than 0.05\%
FREQUENCY RESPONSE:
20 Hz to $20 \mathrm{kHz}, \pm 0.15 \mathrm{~dB}$
8 Hz to $100 \mathrm{kHz},+0 /-3 \mathrm{~dB}$

## ARCHITECT'S AND ENGINEER'S SPECIFICATIONS

The amplifier shall contain all solid-state circuitry, using complementary silicon output devices. The amplifier shall exceed the efficiency of an ordinary class-B linear output circuit. Overall electrical efficiency, with four or eight-ohm loads, shall exceed $35 \%$ at $1 / 3$ power and $29 \%$ at $1 / 8$ power. The amplifier shall operate from $50-60 \mathrm{HzAC}$ power, with internal taps for selecting voltages 100,120 , or $220-240 \mathrm{Vac}$. The amplifier shall operate from a normal household AC outlet, drawing less than 1440 VA when driven with random program material at $1 / 8$ rated power into four ohm loads. The amplifier shall be supplied with a single molded AC cord having an appropriate AC plug for the intended operating voltage.

The amplifier shall employ forced-air cooling with a two speed fan for minimum acoustic noise. Air flow shall be from rear to front to avoid temperature rise inside the rack. Rack mounting shall be possible without clearance necessary betw een amplifiers for ventilation. The amplifier shall be capable of continuous operation at $1 / 8$ power, into four-ohm loads, for ambient temperatures up to $104^{\circ} \mathrm{F}\left(40^{\circ} \mathrm{C}\right)$.

SENSITIVITY: 1.07 Vrms for rated power (8 ohms)
VOLTAGE GAIN: 56 ( 35 dB )
IN PUT IM PEDANCE: 10K unbalanced, 20K balanced
CONTROLS:
Front: AC Switch, Ch 1 and Ch 2 Gain Knobs
Back: Parallel/Stereo/Bridge Switch

## INDICATORS:

PWR-ON: Green LED
SIGNAL PRESENT: Yellow LED
CLIP: Red LED
PROT: Red LED
CONNECTORS: (each channel)
Input: Barrier strip and 1/4" RTS
Speakers: "Touch proof" binding posts
COOLING: Tw o-speed fan, rear-to-front air flow.

## AM PLIFIER PROTECTION:

Full short circuitt, open circuit, ultrasonic, and RF protection. Stable into reactive or mismatched loads.

## LOAD PROTECTION:

On/off muting. DC-fault load grounding relay with internal fault fuses.

## OUTPUT CIRCUIT TYPE:

Complementary linear outputs, 2 step high efficiency circuit.
POW ER REQUIREM ENTS: $100,120,240 \mathrm{Vac}, 50-60 \mathrm{~Hz}$

## POW ER CONSUM PTION:

Normal Operation: 4 ohms per channel: less than 12 amps, $120 \mathrm{Vac}(1440 \mathrm{VA})$ maximum (full power, 2 ohms per channel): $37 \mathrm{amps}, 120 \mathrm{Vac}(4450 \mathrm{VA})$

## DIMENSIONS:

19.0 " $(48.3 \mathrm{~cm})$ rack mounting
$5.25^{\prime \prime}$ ( 13.3 cm ) tall ( 3 spaces)
$17.9^{\prime \prime}(45.5 \mathrm{~cm})$ deep (rear support ears)
W EIGHT: $54 \mathrm{lbs}(24.4 \mathrm{~kg}$ ) net, $62 \mathrm{lbs}(28.0 \mathrm{~kg})$ shipping
†Output Averaging" short circuit protection (US Patent 4,321,554)
SPECIFICATIONS SUBJ ECT TO CHANGE WITHOUT NOTICE.

The amplifier shall contain two independent channels, with separate AC transformers, power supplies, and protection systems. All protection systems shall be self resetting upon removal of fault, and the remaining channel shall continue to operate. Each channel shall have independent protective circuitry against open circuit, short circuit, or mismatched loads. Each channel shall monitor temperature of its heat sink and power transformer, and shall trigger fan speed boost, and if necessary, signal muting to prevent excessive temperature rise. Each channel shall have on-off muting, acting for three seconds after turn-on, and within $1 / 4$ second after turn-off or loss of AC pow er. Each channel shall have DC fault protection for the load, consisting of a load-grounding relay with fault fusing to interrupt power. Fault fuses shall be adequately large to prevent nuisance blowing at any output power the amplifier is capable of delivering.

Each channel shall have the follow ing controls and displays: A front panel Gain control, a green LED pow er-on indicator; one yellow LED signal indicator, triggering at -30 dB ; a red LED show ing true amplifier clipping; and a red LED which indicates muting when illuminated.

The output connectors for each channel shall include a "touch proof" binding post.

The input connectors shall be mounted on a removable panel to permit upgrades. The standard input panel shall provide barrier strip and 1/4" connections for each channel. Inputs shall be electronically balanced, with a minimum impedance of 10 kilohms per side, and a common mode rejection of at least 50 dB from 20 Hz to 20 kHz . The standard input panel shall contain switches for mono-bridging and parallel inputs, and solder patterns for input isolation transformers, gain reduction resistors, and firstorder high and low pass filters .

The input panel shall have enough space behind it to contain a circuit board measuring up to 5.9 " wide by 4.1 " deep. The multi-pin connector to the amplifier circuitry shall supply positive and negative DC supply currents, and for each channel, balanced input signals, output signal, and clip/protect signal.

Each channel shall be capable of meeting the following performance criteria with both channels driven: Sine-wave output power of 450 watts into eight ohms, and 650 w atts into four ohms, 20 Hz to 20 kHz , with less than $0.1 \%$ THD. Frequency response at 3dB below rated power shall be 20 Hz to 20 kHz within 0.15 dB . The voltage gain shall be 56 , equivalent to 35 dB , and the input sensitivity shall be 1.07 Vrms . The signal to noise ratio over the range of 20 Hz to 20 kHz shall exceed 100 dB unw eighted. IHF damping factor shall exceed 200.

The amplifier chassis shall occupy two rack spaces, with provision for securing the rear corners. Depth from mounting surface to tips of rear supports shall be $17.9^{\prime \prime}(455 \mathrm{~cm})$.

W eight shall not exceed 54 lbs . ( 24.4 kg .). The amplifier shall be the QSC Audio Products M odel MX 2000a.
