SERIES THREE AMPLIFIERS FROM QSC

MODEL 3350

The QSC Series Three Model 3350 is designed for high power audio applications where reference quality audio reproduction must be combined with rugged low-profile design. Engineered specifically for recording studio\touring systems and engineered sound, this amp is well suited for any high quality professional audio application. Because of the high output power, this amplifier is an excellent choice for driving medium sized full range systems or mid-enclosures on multi-way systems.

The amplifier is passively cooled and uses a high efficiency output circuit to reduce operating temperatures. The dual mono configuration and front removable channel module design are important features for those interested in very high reliability and minimum down time. A comprehensive interface panel is provided to assure proper connection to any professional system.

Features:
- Low Profile Chassis
- 200 Watts Per Channel At 8 Ohms
- 300 Watts Per Channel At 4 Ohms
- Dual Mono Configuration
- Front Removable Channel Modules
- Three Year Warranty
- Precision 31 Step Detented Gain Controls
- Passive Cooling with High Efficiency Output Circuit
- Comprehensive Interface Panel
- Passive and Active Accessory Input Modules
- Automatic Back-up in Bridged Mono Mode
### SPECIFICATIONS

**MODEL 3350**

**OUTPUT POWER** (per channel)

Continuous Average Output Power
- Both channels driven: 16 ohms, 20–20kHz, 0.1% THD 400 watts
- 8 ohms, 20–20kHz, 0.1% THD 260 watts
- 4 ohms, 20–20kHz, 0.1% THD 130 watts
- 2 ohms, 1kHz, 1% THD 450 watts

Bridged-mono operation
- 8 ohms, 20–20kHz, 0.1% THD 300 watts
- 4 ohms, 1kHz, 1% THD 840 watts

**load protection**
- Indefinite short circuit, open circuit, overload, thermal, and RF protection
- Outputs protected from overloads
- All protection completely independent on each channel

**specifications**
- Frequency response: 20–20kHz with less than 0.1dB deviation
- Noise level: 0.015% typical
- Sensitivity: 1V RMS for rated power (8 ohms)
- Distortion: THD – 0.1% from 250 milliwatts to rated power shall be less than 0.1%, 0.015% typical
- Dynamic headroom: 1V RMS for rated power (8 ohms)
- Power supply: 8–300VAC +3/-3 dB
- Noise: <100dB 20–20kHz
- Frequency response: 20–20kHz with less than 0.1dB deviation
- Input impedance: 20k ohms balanced or unbalanced
- Balance bridging input circuitry shall be standard
- Balanced/Unbalanced input jacks of the ¼ inch ring-tip-sleeve, female XLR, and barrier strip type
- Noise level shall be within 1dB:
  - Green/Red LED for power/protection indication
  - Yellow LED signal presence indicators for outputs 6dB and 30dB below rated power
  - Red LED indicator for any output clipping greater than 0.1%
  - Flashing red LED indicator for heat sink temperatures within 10°C of thermal shutdown
- Balanced/Unbalanced input jacks of the ¼ inch ring-tip-sleeve, female XLR, and barrier strip screw terminal type
- Speaker connections of the five-way binding post and barrier strip screw terminal type
- Output circuit type: Full complementary two-level high efficiency
- Output devices: (Total) 16
- Power supply: Two completely separate power supplies including AC switches and AC circuit breakers; only AC cord is common
- Power requirements: 120, 220, or 240V, 50–60Hz, 8A (Each channel)

### ARCHITECT’S AND ENGINEER’S SPECIFICATIONS

The amplifier shall contain all solid-state circuitry, using complementary/silicon transistors and integrated circuits. It shall be capable of operating from 120, 220 or 240V, 50–60Hz AC mains with internally selectable jumpers.

The amplifier shall contain two fully independent channels, with separate AC switches, circuit breakers, power transformers, and protective systems. Each channel shall have independent protective circuitry against open-circuit, short-circuit or mismatched loads; independent thermal warning and shutdown circuits, and independent load protection circuits for turn on/off transients including momentary AC drops and DC faults within or preceding the amplifier. All protective circuits shall be self-resetting. The remaining channel shall continue to operate, in stereo or bridged-mono mode, after failure of either channel.

Each channel of the amplifier shall be capable of meeting the following performance criteria, with both channels driven simultaneously:

Output power into 8 ohms: 200 watts, from 20-20kHz, with less than 0.1% distortion.

Output power into 4 ohms: 300 watts, from 20-20kHz, with less than 0.1% distortion.

Output power into 2 ohms: 450 watts, at 1kHz, with less than 1% distortion.

Frequency response: 20–20kHz with less than 0.1dB deviation.

The voltage gain shall be 63dB at full Gain.

The input sensitivity for rated 8-ohm power shall be 1V RMS.

Balanced bridging input circuitry shall be standard, and the amplifier shall meet all performance criteria in the balanced or unbalanced mode.

Input impedance shall be 20k ohms balanced or unbalanced.

Noise level shall be within 1dB:
- Green/Red LED for power/protection indication
- Yellow LED signal presence indicators for outputs 6dB and 30dB below rated power
- Red LED indicator for any output clipping greater than 0.1%
- Flashing red LED indicator for heat sink temperatures within 10°C of thermal shutdown

Balanced/Unbalanced input jacks of the ¼ inch ring-tip-sleeve, female XLR, and barrier strip screw terminal type

Speaker connections of the five-way binding post and barrier strip screw terminal type

An octal socket with DC power for passive and active plug-in input accessory modules

8-way microswitches for octal socket bypass, mono-bridged mode, cross-connection of channels and XLR input polarity

Each channel shall be front-removable with the amplifier mounted in a rack and without disconnecting the input/output cables. All active components, except AC power transformer, AC switch, circuit breaker, and input/output connectors, shall be mounted on the removable channel module. Module connectors shall be flexible to withstand shocks and vibration.

The amplifier chassis shall have a permanently attached AC cord, and a ground-lift jumper which permits the separation of circuit and chassis grounds if required.

The chassis shall have front and rear 19” rack supports, and shall occupy two rackspaces (3.5”) Chassis depth, including rear supports, shall be 17.9 inches.

Weight shall be 42 lbs.

The power amplifier shall be the QSC Audio Products Model 3350.
